Joel Oranen

Data Engineer

Data engineer with a background in business and strategic foresight. I build data platforms and pipelines in the cloud and understand what the business needs data for. I believe quality data and good collaboration are essential to creating value.

Work experience

2026– **Data Engineer, Cloud2**
Building data platforms and pipelines in the cloud for enterprise clients.

2024–2026 **Data Engineer, Skillio**
Developed an AI-based teaching assistant: transformed text data, collected material from public web sources, and modelled and visualised the company's databases. Python data pipelines and reporting on Google Cloud.

6/2022–2/2024 **Foresight Specialist, KONE**
Developed the company's foresight process and playbook. Interviews and analysis in three innovation projects (including Future of Living and Future of Mobility), administration of the foresight platform, and aligning strategy and foresight.

1/2021–6/2021 **Futures Analyst Trainee, Futures Platform**
Researched and described futures phenomena for the foresight database, facilitated customer workshops and translated content from English to Finnish.

Other work
Customer service, Posti (11/2021–2/2022); sales representative for ASICS, Nordic Sales Crew (8–10/2021); civilian service, Helsinki University Library. Also street fundraising (Finnish Red Cross), night newspaper delivery and Christmas tree sales.

Education

2024 **Data Engineer training programme, Skillio**
Azure, Python, SQL, databases and ETL pipelines.

2020–2023 **Master of Social Sciences, University of Turku**
Major in futures studies, minor in responsible business. Thesis: *Pioneering spirit and village community of the future*.

2015–2020 **BSc (Econ. & Bus. Adm.), Tampere University**
Major in management and business leadership, minor in responsible business. Thesis: responsibility report as a means of customer dialogue, case Paulig.

Skills

Programming: Python, SQL

Cloud: Azure, Google Cloud

Data platforms: Databricks, Microsoft Fabric, BigQuery, Azure Synapse Analytics, PostgreSQL

Data modelling: dbt

Infrastructure and CI/CD: Terraform, GitHub Actions

Reporting: Power BI, Looker Studio

Languages

Finnish	native
English	fluent (C2)
Swedish	satisfactory (B1)
French	basic (A2)

Projects

Energy data platform (2026)
How wind power and weather affect the electricity price. Azure, Databricks, dbt and Terraform.

Bookmaker odds vs. match results (2025)
ETL pipeline from PostgreSQL to BigQuery and Power BI.
